TENTANG WEBSITE

4UTHENTIC ADALAH SUATU BLOG TENTANG DESTINASI PARIWISATA YANG ADA DI INDONESIA.

BLOG INI DIBUAT OLEH MAHASISWA KELOMPOK 4 KOM B YANG BERASAL DARI UNIVERSITAS SUMATERA UTARA.

DESTINASI PARIWISATA YANG PERTAMA KALI KAMI KULIK BERASAL DARI DAERAH KEPULAUAN RIAU YANG ADA DI PULAU SUMATERA.

ALASANNYA KARENA DI DAERAHINI BANYAK DESTINASI PARIWISATA PERAIRAN TERUTAMA PANTAINYA. BANYAK PANTAI YANG CANTIK DISANA.

SEMOGA BLOG INI BERMENFAAT, MENAMBAH PENGETAHUAN, DAN MEMBUAT KITA SEMAKIN CINTA AKAN PARIWISATA INDONESIA.

NAMA 4UTHENTICINI MERUPAKAN IDE DARI ANGGOTA KELOMPOK KAMI YAITU FARHAN YEHANDA.

IDE INI TERCETUSKAN KETIKA KAMI SEDANG MENDISKUSIKAN NAMA DAN LOGO KELOMPOK.

4UTHENTIC ADALAH PLESETAN DARI KATA AUTHENTIC, DIKARENAKAN KAMI KELOMPOK 4 MAKA HURUF A YANG BERADA DI DEPAN DIGANTI JADI 4.

MENGUNAKAN TAG LINE "IT'S ABOUT SUMMER, SEA, AND OUR STORY". BLOG INI BERISIKAN TENTANG WISATA REKREASI PANTAI YANG MANA PANTAI IDENTIK DENGAN SUMMER DAN BIASANYA SUMMER SELALU MEMILIKI CERITANYA SENDIRI

TAMPILAN MENU

The screenshot displays a dark-themed website with a yellow border. At the top left is a logo consisting of a small gold emblem and the text '4UTHENTIC'. To the right is a search bar placeholder 'Cari Tempat Wisata di Indonesia' and a magnifying glass icon. On the far right is a white 'X' button. Below the header, there's a large, semi-transparent dark overlay featuring a photograph of a dense jungle scene with a river and a small boat. Overlaid on this image are several text elements: 'Tayo / 2021-05-30 10:13:07 / hutan', 'Kawasan hutan bakau ini lebat dan rimbuhan, serupa lagi di Hutan Amazon Brasil. Ada dua cara untuk menyusuri hutan bakau ini, yaitu dengan berjalan kaki atau menaiki speedboat.', a 'CONTINUE READING' button, and a 'Home' link. To the right of the image, there are three menu items: 'About Us', 'Gallery', and a 'LOGIN' button with a key icon. At the bottom of the page, the text 'WE CREATE AWESOME JOURNEY FOR YOU' is visible.

TAMPILAN ABOUT

The screenshot shows a web browser window with the URL `127.0.0.1:8000/about`. The page has a header with the logo "4UTHENTIC" and a menu icon. The main content area has a blue background with a starfish in the center. The title "ABOUT US" is displayed below the starfish. The page lists six team members in a grid:

Icon	Name	NIM
Speech bubble	Anggota Kelompok 4	201402050
Gears	Kelvin Nathanael Lumbanraja	201402098
Phone	Tasya Ananda	
Globe	201402101	
Handshake	Maria Angel Carolin Br Karo	201402137
Microphone	Felix Oshwalt Christian Rumahorbo	Farhan Yehanda

TAMPILAN GALERI

TAMPILAN KONTEN GABUNGAN DENGAN RECENT POST

The screenshot displays a website layout with a dark header and footer. In the center, there is a large, high-quality photograph of two traditional wooden boats (canoes) floating on clear, turquoise water near a rocky, green-covered island under a bright blue sky with scattered white clouds.

        'password' => Hash::make($data['password']),  
    ]);  
}
```

REGISTER CONTROLLER

MODEL USER

The screenshot shows the User.php file in Visual Studio Code. The code defines a User model that extends the Authenticatable trait from the Illuminate\Foundation\Auth\User class. It includes protected properties for mass assignable attributes like name, email, and password, and hidden attributes like password and remember_token. It also defines protected casts for email_verified_at to datetime. A posts() method returns a relationship to the Post model.

```
use Illuminate\Foundation\Auth\User as Authenticatable;
use Illuminate\Notifications\Notifiable;

class User extends Authenticatable
{
    use HasFactory, Notifiable;

    /**
     * The attributes that are mass assignable.
     *
     * @var array
     */
    protected $fillable = [
        'name',
        'email',
        'password',
    ];

    /**
     * The attributes that should be hidden for arrays.
     *
     * @var array
     */
    protected $hidden = [
        'password',
        'remember_token',
    ];

    /**
     * The attributes that should be cast to native types.
     *
     * @var array
     */
    protected $casts = [
        'email_verified_at' => 'datetime',
    ];

    public function posts(){
        return $this->hasMany(Post::class);
    }
}
```

MODEL POST

The screenshot shows the Post.php file in Visual Studio Code. The code defines a Post model that extends the Model trait from the Illuminate\Database\Eloquent\Model class. It includes a public author() method that returns the belongsTo relationship to the User model.

```
<?php
namespace App\Models;

use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Database\Eloquent\Model;

class Post extends Model
{
    use HasFactory;

    public function author(){
        return $this->belongsTo(User::class);
    }
}
```

MODEL DATA USER

The screenshot shows the Datauser.php file in Visual Studio Code. The code defines a Datauser model that extends the Model trait from the Illuminate\Database\Eloquent\Model class. It specifies the table as 'users', has an id primary key, and protected fillable attributes id, nama, and email.

```
<?php
namespace App\Models;

use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Database\Eloquent\Model;

class Datauser extends Model
{
    /**
     * The protected $table = 'users';
     * protected $primaryKey = "id";
     * protected $fillable = [
     *     'id', 'nama', 'email'
     * ];
    */
}
```

Migration user

The screenshot shows the Visual Studio Code interface with the file '2014_10_12_000000_create_users_table.php' open. The code defines a migration class 'CreateUsersTable' that creates a 'users' table with columns for id, name, email (unique), password, email_verified_at, remember_token, and timestamps.

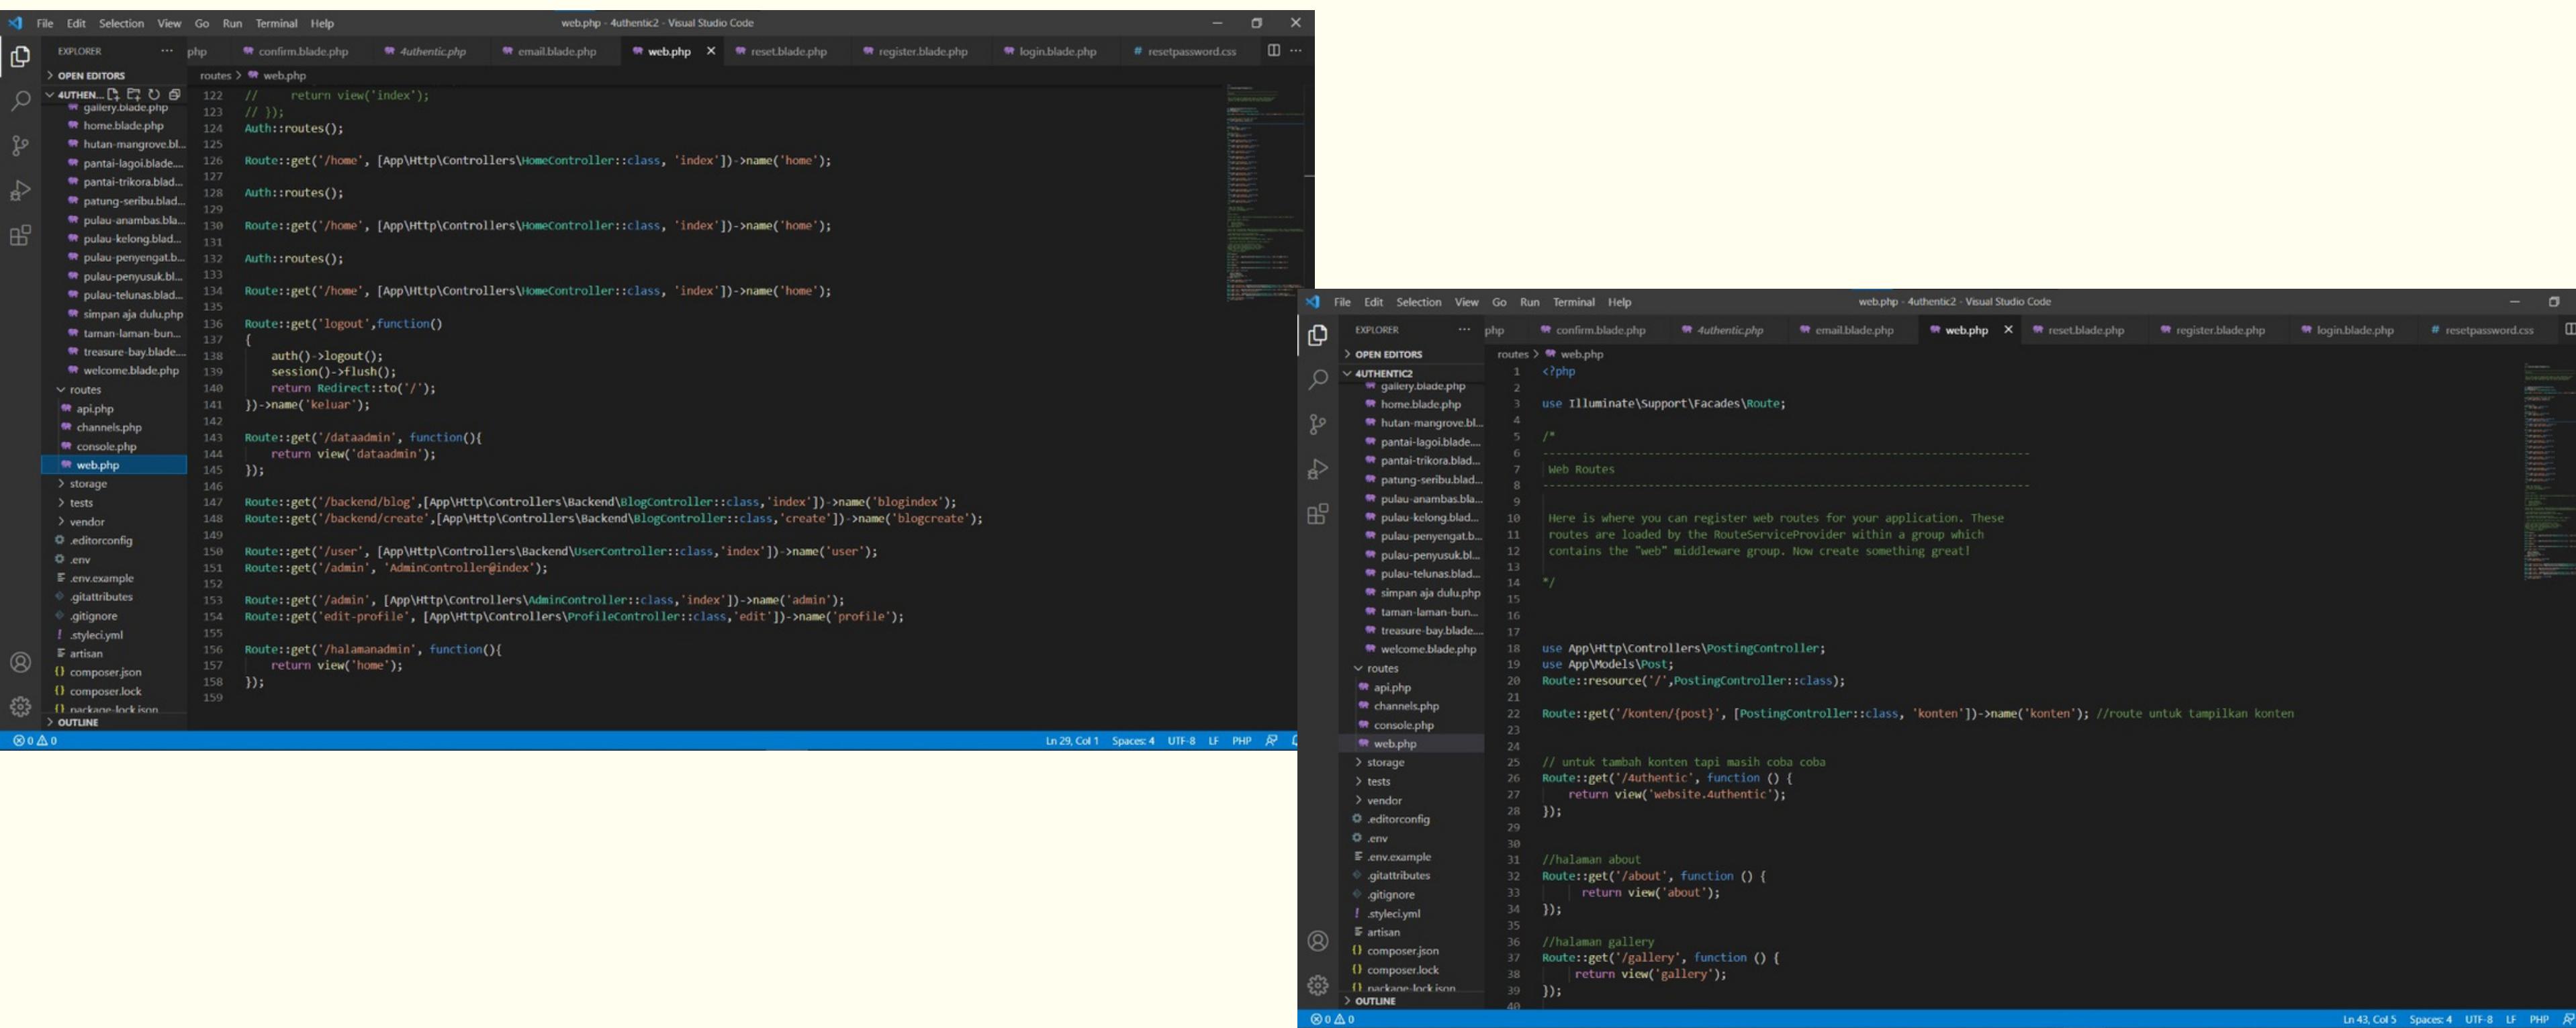

```
<?php  
use Illuminate\Database\Migrations\Migration;  
use Illuminate\Database\Schema\Blueprint;  
use Illuminate\Support\Facades\Schema;  
  
class CreateUsersTable extends Migration  
{  
    /**  
     * Run the migrations.  
     *  
     * @return void  
     */  
    public function up()  
    {  
        Schema::create('users', function (Blueprint $table) {  
            $table->id();  
            $table->string('name');  
            $table->string('email')->unique();  
            $table->timestamp('email_verified_at')->nullable();  
            $table->string('password');  
            $table->rememberToken();  
            $table->timestamps();  
        });  
    }  
  
    /**  
     * Reverse the migrations.  
     *  
     * @return void  
     */  
    public function down()  
    {  
        Schema::dropIfExists('users');  
    }  
}
```

The screenshot shows the Visual Studio Code interface with the file 'ForgotPasswordController.php' open. The controller extends the 'Controller' class and includes the 'SendsPasswordResetEmails' trait. It handles password reset requests for users.

```
<?php  
namespace App\Http\Controllers\Auth;  
use App\Http\Controllers\Controller;  
use Illuminate\Foundation\Auth\SendsPasswordResetEmails;  
  
class ForgotPasswordController extends Controller  
{  
    /*  
     * This controller is responsible for handling password reset emails and  
     * includes a trait which assists in sending these notifications from  
     * your application to your users. Feel free to explore this trait.  
     */  
  
    use SendsPasswordResetEmails;  
}
```

Forgot password controller

ROUTE

The image shows two side-by-side instances of the Visual Studio Code editor, both displaying the file `web.php` from a Laravel application named `4UTHEN...`.

Left Instance (Full Route Configuration):

```
routes > web.php
122 //      return view('index');
123 // });
124 Auth::routes();
125
126 Route::get('/home', [App\Http\Controllers\HomeController::class, 'index'])->name('home');
127
128 Auth::routes();
129
130 Route::get('/home', [App\Http\Controllers\HomeController::class, 'index'])->name('home');
131
132 Auth::routes();
133
134 Route::get('/home', [App\Http\Controllers\HomeController::class, 'index'])->name('home');
135
136 Route::get('logout',function()
{
    auth()>logout();
    session()->flush();
    return Redirect::to('/');
})->name('keluar');
141
142
143 Route::get('/dataadmin', function(){
    return view('dataadmin');
});
144
145
146
147 Route::get('/backend/blog',[App\Http\Controllers\Backend\BlogController::class,'index'])->name('blogindex');
148 Route::get('/backend/create',[App\Http\Controllers\Backend\BlogController::class,'create'])->name('blogcreate');
149
150 Route::get('/user', [App\Http\Controllers\Backend\UserController::class,'index'])->name('user');
151 Route::get('/admin', 'AdminController@index');
152
153 Route::get('/admin', [App\Http\Controllers\AdminController::class,'index'])->name('admin');
154 Route::get('edit-profile', [App\Http\Controllers\ProfileController::class,'edit'])->name('profile');
155
156 Route::get('/halamanadmin', function(){
    return view('home');
});
157
158
159
```

Right Instance (Simplified Version with Comments):

```
routes > web.php
1 <?php
2
3 use Illuminate\Support\Facades\Route;
4
5 /*
6 ----- Web Routes -----
7
8 Here is where you can register web routes for your application. These
9 routes are loaded by the RouteServiceProvider within a group which
10 contains the "web" middleware group. Now create something great!
11
12 */
13
14
15
16
17
18 use App\Http\Controllers\PostingController;
19 use App\Models\Post;
20 Route::resource('/', PostingController::class);
21
22 Route::get('/konten/{post}', [PostingController::class, 'konten'])->name('konten'); //route untuk tampilan konten
23
24
25 // untuk tambah konten tapi masih coba coba
26 Route::get('/4uthentic', function () {
27     return view('website.4uthentic');
28 });
29
30
31 //halaman about
32 Route::get('/about', function () {
33     return view('about');
34 });
35
36 //halaman gallery
37 Route::get('/gallery', function () {
38     return view('gallery');
39 });
40
```
